FOR IMMEDIATE RELEASE

AMEDIA NETWORKS TO PRESENT AT 3rd ANNUAL IPTV 2007 TECHNOLOGY CONFERENCE

EATONTOWN, N.J. - February 26, 2007 - Amedia Networks, Inc. (OTC BB: AANI), a provider of next generation media gateways to distribute and manage ultra-broadband triple-play services in the home, today announced that company representative Sid Nag will be a featured speaker at the IPTV 2007 Technology Conference to be held in San Jose, California from February 27-28. IPTV, now in its third year, brings together cutting edge technology developers and implementers to create a forum in which they can develop a common vision and implementation strategy for tomorrow's IPTV solutions in the ever-changing IPTV market.

On February 27 from 12:00 - 12:45 PM, Mr. Nag will lead a session entitled "Breaking Down the Walled Garden - Anywhere, Anytime Media Access Within the Home", which will explore how the next generation of ultra-broadband gateways is being designed as the nerve center of the networked home. The presentation will focus on the broader capabilities available for telecommunications companies to deliver new, interactive content and media services that venture well beyond that of traditional broadcast TV - often referred to as the "Walled Garden." Mr. Nag will offer expert insight into how these new gateways, leveraging built-in intelligence, will enable telecommunications carriers to better control their existing services as well as roll-out new revenue-generating services tied to triple-play. This will not only allow telcos to compete with Cable TV providers, but leapfrog these competitors with a suite of "connected" and very attractive media services.

About IPTV 2007 Technology Conference

IPTV is a premier event which brings together leading innovators from all facets of the IPTV ecosystem to provide critical perspectives on IPTV technologies and strategies for deployment and implementation. For more, visit <http://www.s2data.com/iptv2007/default.htm>

About Amedia Networks, Inc.

Amedia Networks, Inc. (OTC BB: AANI) provides next generation residential media gateways to distribute and manage high-quality voice, high-definition video, and high-speed data services throughout the networked home. The Amedia residential gateway offers a single, compact, configurable device with the collective functionality of a modem, wireless access point, router, VoIP adapter, and family firewall - all in one. In addition, it features external media storage and a built-in operating system for carriers to continuously develop and deliver new, ultra-broadband applications to the home. The company is led by an executive team with a long and proven history in the voice, data, and telecom industries, and its core technologies have been co-developed by Lucent Technologies, Inc.'s renowned Bell Laboratories unit. For more information, visit www.amedia.com.
